Claims Presented

3. Claims 1-34, 45-54 are presented for examination.

Allowable Subject Matter

4. Claims 1-34, 45-54 are allowed.

5. The following is an examiner's statement of reasons for allowance: Regarding claims 1-34, 45-54, such particular means for locating the subject are not taught by the prior art. The means is described generally at pages 24-59 of the specification. Of particular interest are Figures 1, 3, 5-9 and the descriptions accompanying the figures. As noted at page 39, the means have the use of FPGA using such particular software libraries. As noted at pages 53-59, the means uses such particular operation by software which uses (among others) a correlation computer with such particular correlation database.

Art Unit: 2177

6. What is meant by a correlation database? Surely, this does not refer to the literal meaning of correlation (which would mean that this is a database of correlations among data factors -- the literal meaning of "correlation" refers to a number between zero and one that gives a numerical indication of how close the two data factors are matched). Pages 53-59, among others, define such correlation database (which is recited, among others, in claims 45-54) to have such characteristics so as to be used with such particular means described at pages 24-29 of the specification. For example, regarding claim 1 in particular, such particular system for correlating crime incidents with the location of a subject, comprising in combination: crime incident data containing information about the location and time of at least one crime; subject location data containing information about the locations at various times of a plurality of subjects; correlation computer including a correlation database; means for supplying said crime incident data to said correlation database of said correlation computer; means for supplying said subject location data to said correlation database said correlation computer; said correlation computer including means for correlating said crime incident data and said subject location data to determine if each of said subjects are likely suspects of

Art Unit: 2177

said crime based upon whether each of said subjects were proximate to said location of said crime at said time of said crime is not taught or suggested by the prior art.

Conclusion

7. The art made of record and not relied upon is considered pertinent to applicant's disclosure. The art disclosed general background.
